

GEN 2. TABLES AND CODES

GEN 2.1 MEASURING SYSTEM, AIRCRAFT MARKINGS, HOLIDAYS

1. Units of measurement

The table of units of measurement shown below will be used by aeronautical stations within Israel FIR for air and ground operations.

2. Temporal reference system

General

Co-ordinated Universal Time (UTC) is used by air navigation services and in publications issued by the Aeronautical Information Service. Reporting of time is expressed to nearest minute e.g. 12:40:35 is reported as: 12:41.

In the AIP and associated publications, the expression "summer period" will indicate that part of the year in which "daylight saving time" is in force. The other part of the year will be named the "winter period". Daylight saving time in Israel is UTC plus 3 hours. The "winter period" in Israel is UTC plus 2 hours. The "summer period" will be introduced every year by NOTAM.

3. Horizontal reference system

3.1. Name/designation of system.

All published geographical coordinates indicating latitude and longitude are expressed in terms of the World Geodetic System – 1984 (WGS-84) geodetic reference datum.

3.2. Ellipsoid

Ellipsoid is expressed in terms of the World Geodetic System – 1984 (WGS-84) ellipsoid.

3.3. Datum

The World Geodetic System – 1984 (WGS-84) is used.

3.4. Area of application

The area of application for the published geographical coordinates coincides with the area of responsibility of the Aeronautical Information Service.

3.5. Use of an asterisk to identify published geographical coordinates.

An asterisk (*) will be used to identify those published geographical coordinates which have been transformed into WGS-84 coordinates but whose accuracy of original field work does not meet the requirements in ICAO Annex 11, Chapter 2 and ICAO Annex 14, Volumes I and II, Chapter 2. Specifications for determination and reporting of WGS-84 coordinates are given in ICAO Annex 11, Chapter 2 and in ICAO Annex 14, Volume I and II, Chapter 2.

4. Vertical reference system

4.1 Name/designation of system

The vertical reference system corresponds to mean sea level (MSL).

4.2 Geoid model

The geoid model used is the Earth Gravitational Model 1996 – (EGM-96).

<i>For measurement of</i>	<i>Units used</i>
Distance (long - in excess of 4 000 m)	Nautical mile (NM) or Metre (m)
Distance (short – less than 4 000 m)	Metre (m)
Altitude, elevation and height	Feet (ft)
Horizontal speed including wind speed	Knot (kt) or MACH number (M)
Vertical speed	Feet per minute (ft/min)
Wind direction for landing and take-off	Degree magnetic
Wind direction, except for landing and take-off	Degree true
Visibility, including Runway Visual Range	Kilometre (km) or metre (m)
Altimeter setting	Hectopascal (hPa)
Temperature	Degrees Celsius
Gross Mass or Payload	Tonne or kilogram
Time	Hours, minutes, seconds beginning at midnight UTC unless local time is stated

5. Aircraft nationality and registration marks

hyphen and a registration mark consisting of 3 letters, e.g. 4X-AWH.

The nationality mark for aircraft registered in the State of Israel are the letters 4X. The nationality mark is followed by a
